

## **ENYSSP Webinars: starting off with new energy**

ENYSSP has a long lasting tradition of organizing webinars on different applied and educational topics. Although lately due to MC changes and resource consuming legalization process this initiative got somewhat overlooked by us, we are ready to start off again and with new energy :)

In June 2016 we had our first 'trial' webinar, where we tested new [ZOOM.us](https://zoom.us) platform, which we decided to use for future webinars as well. The webinar was carried out by Snezana and Grzegorz from Applied department on the topic of 'The first meeting with athlete: how to balance between gathering information, creating positive rapport and planting realistic expectations?'. Around fifteen people participated in this 40-minute-long webinar that was divided into two parts: there was a presentation section, followed by Q&A section. Presentation section was supported by slides, which were shared live with all the participants, who were then very active with asking follow-up questions. There are a couple of take-aways from this experience. First of all, as expected, ENYSSP members are active professionals, who look forward to development opportunities, hence we have to do MORE webinars! Secondly, 40 minutes was definitely not enough to cover the topic and manage with all the questions. Thereof our future webinars will be planned for a longer time ;)

Stay tuned! *Webinars are planned to take place every second month as of March 2017.* We will start off with the educational department talking about how to develop scientific posters – just in time for the new conference season! More infos will be uploaded soon!
